Certainly many Mac users will look first at Apple's iWork for a productivity suite, and it is a great office suite in its own right. Choose among great-looking resumes and newsletters, complex photo catalogs, and calendar layouts, which let you fill in your information without the need for extra formatting. Setup The installation for Office 2011 for Mac is quite painless. Just like any other software, you'll be asked for permission to make changes to your system, then it's only about 10 minutes install time (depending on the speed of your Mac). Still, we recommend taking the time to learn the Ribbon as an investment that will save you more time in the future. Even if the selection in Office 2011 doesn't have what you're looking for, you can browse more than 10,000 user-generated templates and filter by category or keywords to get exactly what you want. New Cloudhosting requires that you use SharePoint Foundation 2010 for enterprise use, but for personal or small businesses, you can save and access files over SkyDrive (25GB of available online storage) via Windows Live with a free registration. Not only has it nearly reached feature parity (and cross-compatibility) with the Mac counterparts in Word, Excel, and PowerPoint, but it has finally added Outlook, the e-mail and scheduling client Mac business fans have been clamoring for for years.

Interface The Ribbon has returned as the unifying interface component across all the apps in the suite. If you still just can't get used to the Ribbon, in Office 2011 for Mac, you can turn it off and use regular drop-down menus (an option that several Windows users probably wish they had). Like a lot of software these days, you'll need to have at least Mac OS X 10.5 Leopard to use all the features in the Office 2011 suite. Though the latest package is still not on par with the Windows version (you get only the four main programs—a big difference when you consider the Windows version has 10), Microsoft made a big leap with this latest version for the Mac in several other ways. Though Microsoft has met some resistance from users on both platforms for this particular feature, we think once people get used to the flexibility of the Ribbon it will save them an enormous amount of time. One of the major new changes to the suite (on the Windows side, too) is the ability to collaborate and share your work using Web apps. Free Office Trial on your PC and Mac Download and install your Office 2010 apps on your desktop for free. Add the ease of compatibility with a strong feature set across the entire suite and you have a desktop office package that's almost a must-have in both large and small businesses, and even home productivity settings. Rather than digging through menus and scrolling through palettes, the Ribbon uses tabs that display commands relevant to a given task. You will receive regular updates automatically until the official release in the second half of 2015.
